A UK INDUSTRY STANDARD FOR
PROPERTY ASSET MANAGEMENT

GREEN PAPER A1

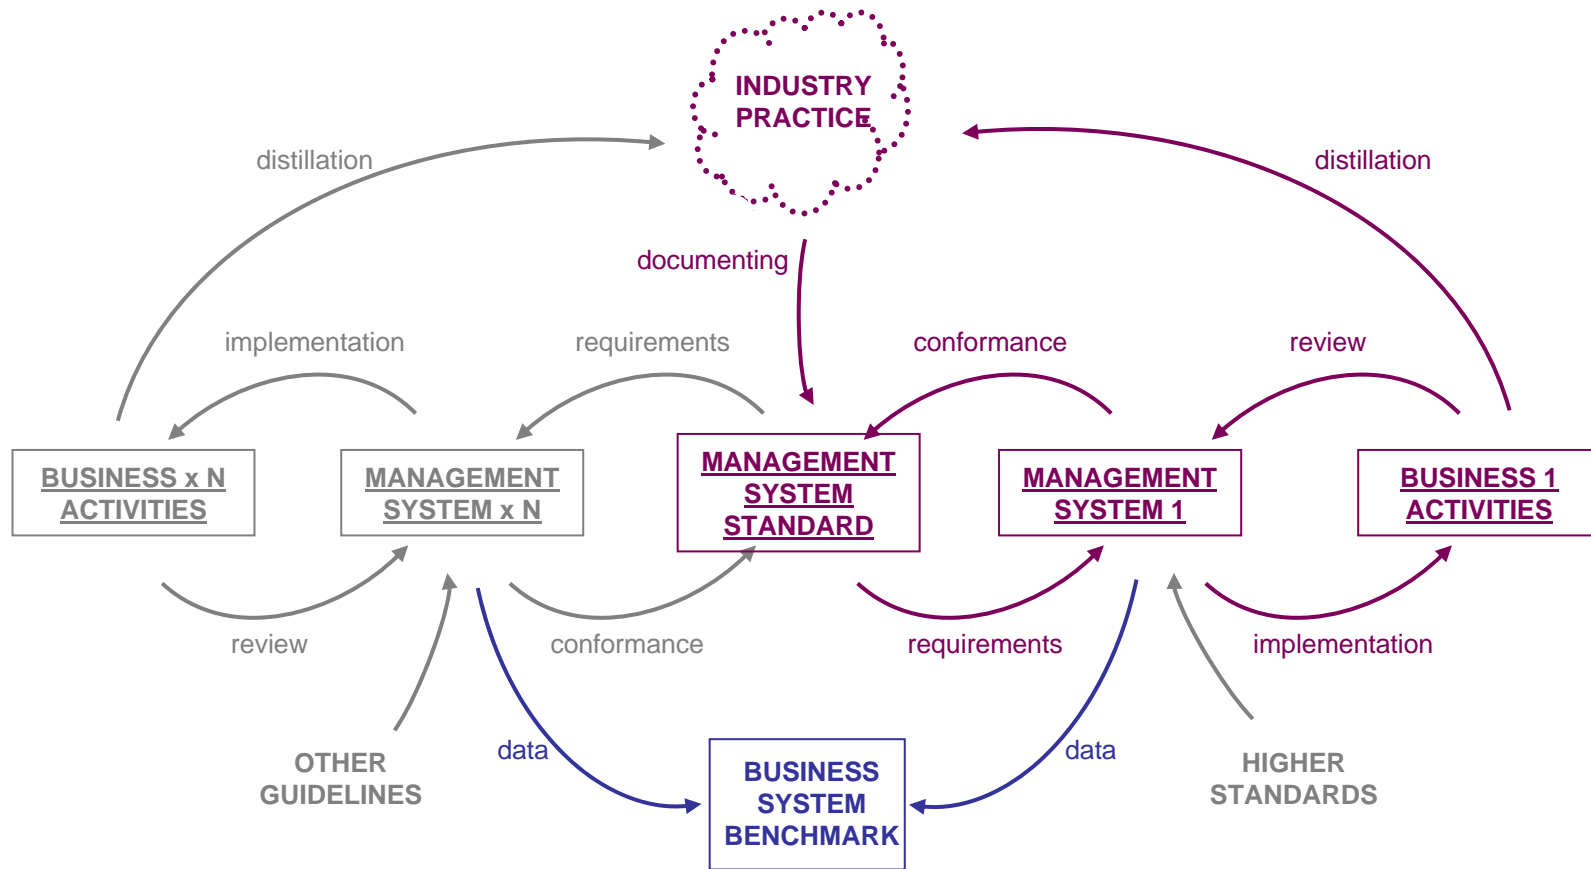

BUSINESS MANAGEMENT SYSTEMS

BUSINESS MANAGEMENT SYSTEMS

1. Specification for a generic system and a set of procedures
2. Systems / process approach – links and networks
3. Operates at a strategic planning level
 - link to organisational structure
 - link to organisational learning
4. Autonomous control - rather than command-and-control
5. Recursive structure – hierarchy of systems within systems

BUSINESS MANAGEMENT SYSTEMS

Means by which an organisation sets out to achieve its goals:

REGULATING – keeping on course

CONTROLLING – steering towards an objective

COMMUNICATING – co-ordination between different parts of the system

ADAPTING – learning to match external environment and remain viable

SYSTEMS APPROACH

'Do not assume that people can be held responsible for performance, for their performance is governed by the system within which they work.'

W EDWARDS DEMING

SYSTEMS APPROACH

'Any initiative that illuminates the dynamic between business and its assets, and provides practical approaches to improve the management of this process is welcome.'

SIR DAVID VARNEY

SYSTEM

A set of inter-related parts with a common purpose:

1. All parts must be present for the system to carry out its purpose optimally
2. Parts must be arranged in a specific way – links are very important
3. Systems have specific purposes within larger systems
4. Systems use feedback to make adjustments and maintain their stability

My advice about the 'standard'

It should be unlike any other standard

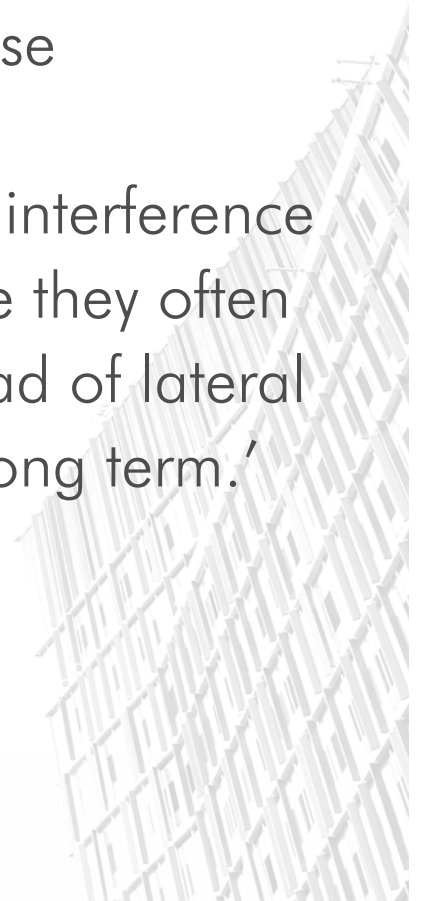

Any requirement should be expressed only in broad terms:

It is expected that the user takes a systems approach to understanding and improvement

COMMAND-AND-CONTROL

'Sadly, it is not unusual that people, especially those operating in traditional, hierarchically structured organisations, perceive standards as bureaucratic interference with their personal freedom. This is partly because they often appear as instructions coming down the line instead of lateral support, designed to make their life easier in the long term.'

RAUL ESPOJO

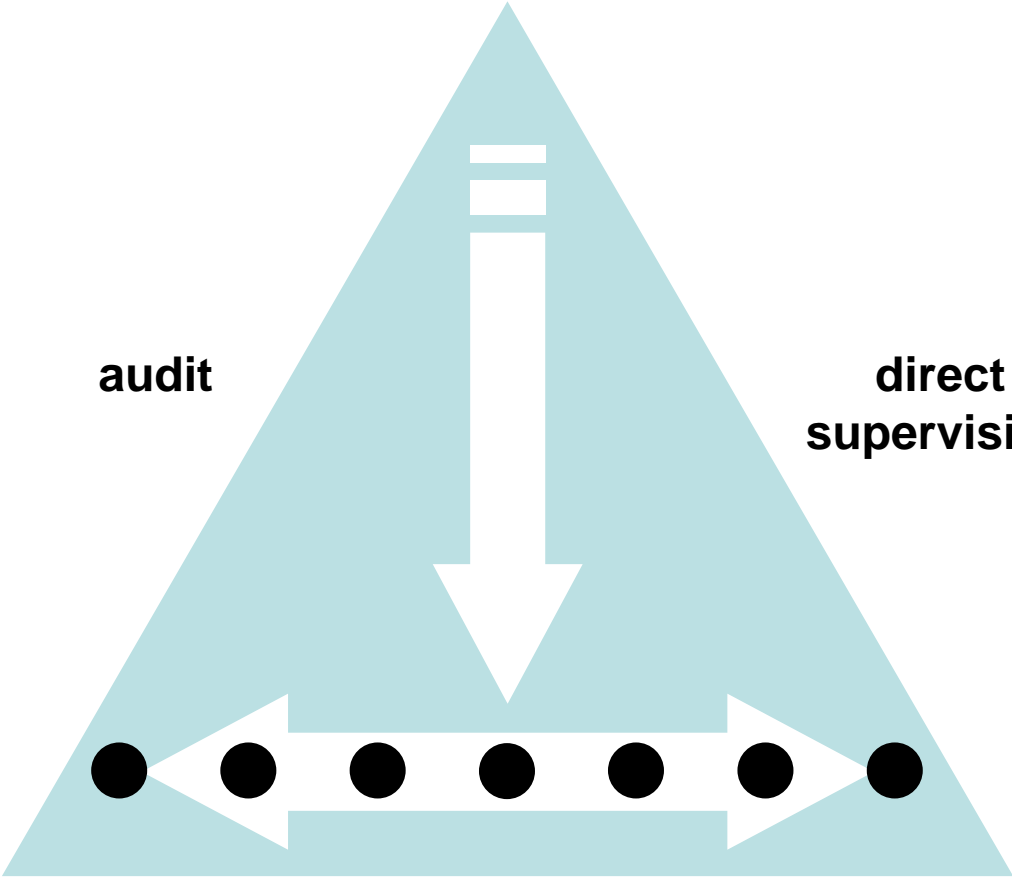

AUTONOMOUS CONTROL

'However, if [managers] can learn to support [autonomous] co-ordination, communicating their purpose with greater clarity, they may begin to change this attitude, and if such guidelines are clearly couched in language different from that of direct commands and instructions, their acceptance may increase.'

RAUL ESPOJO

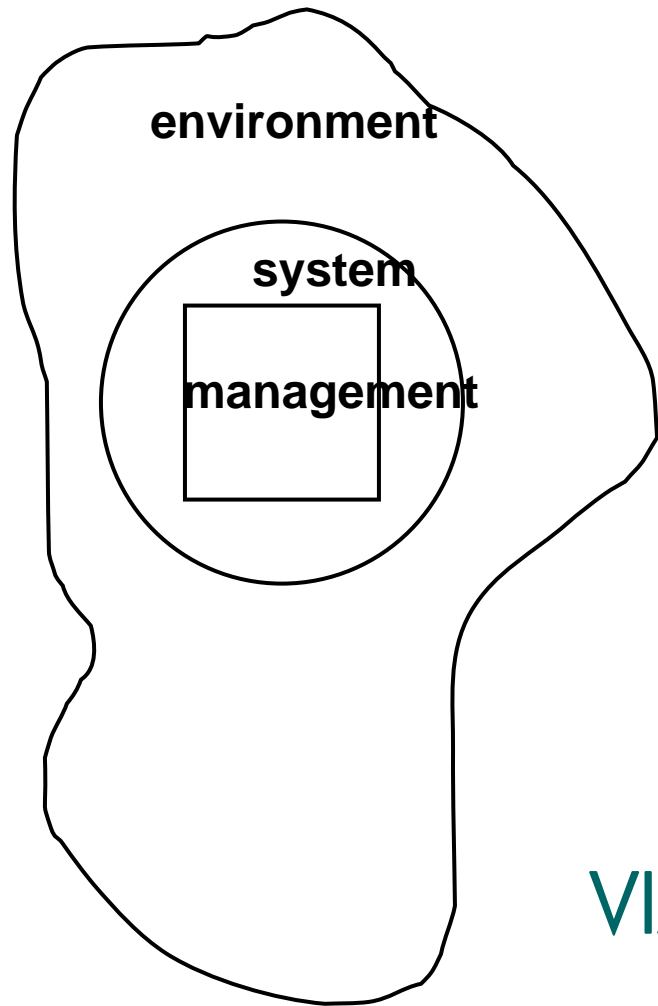

audit

**direct
supervision**

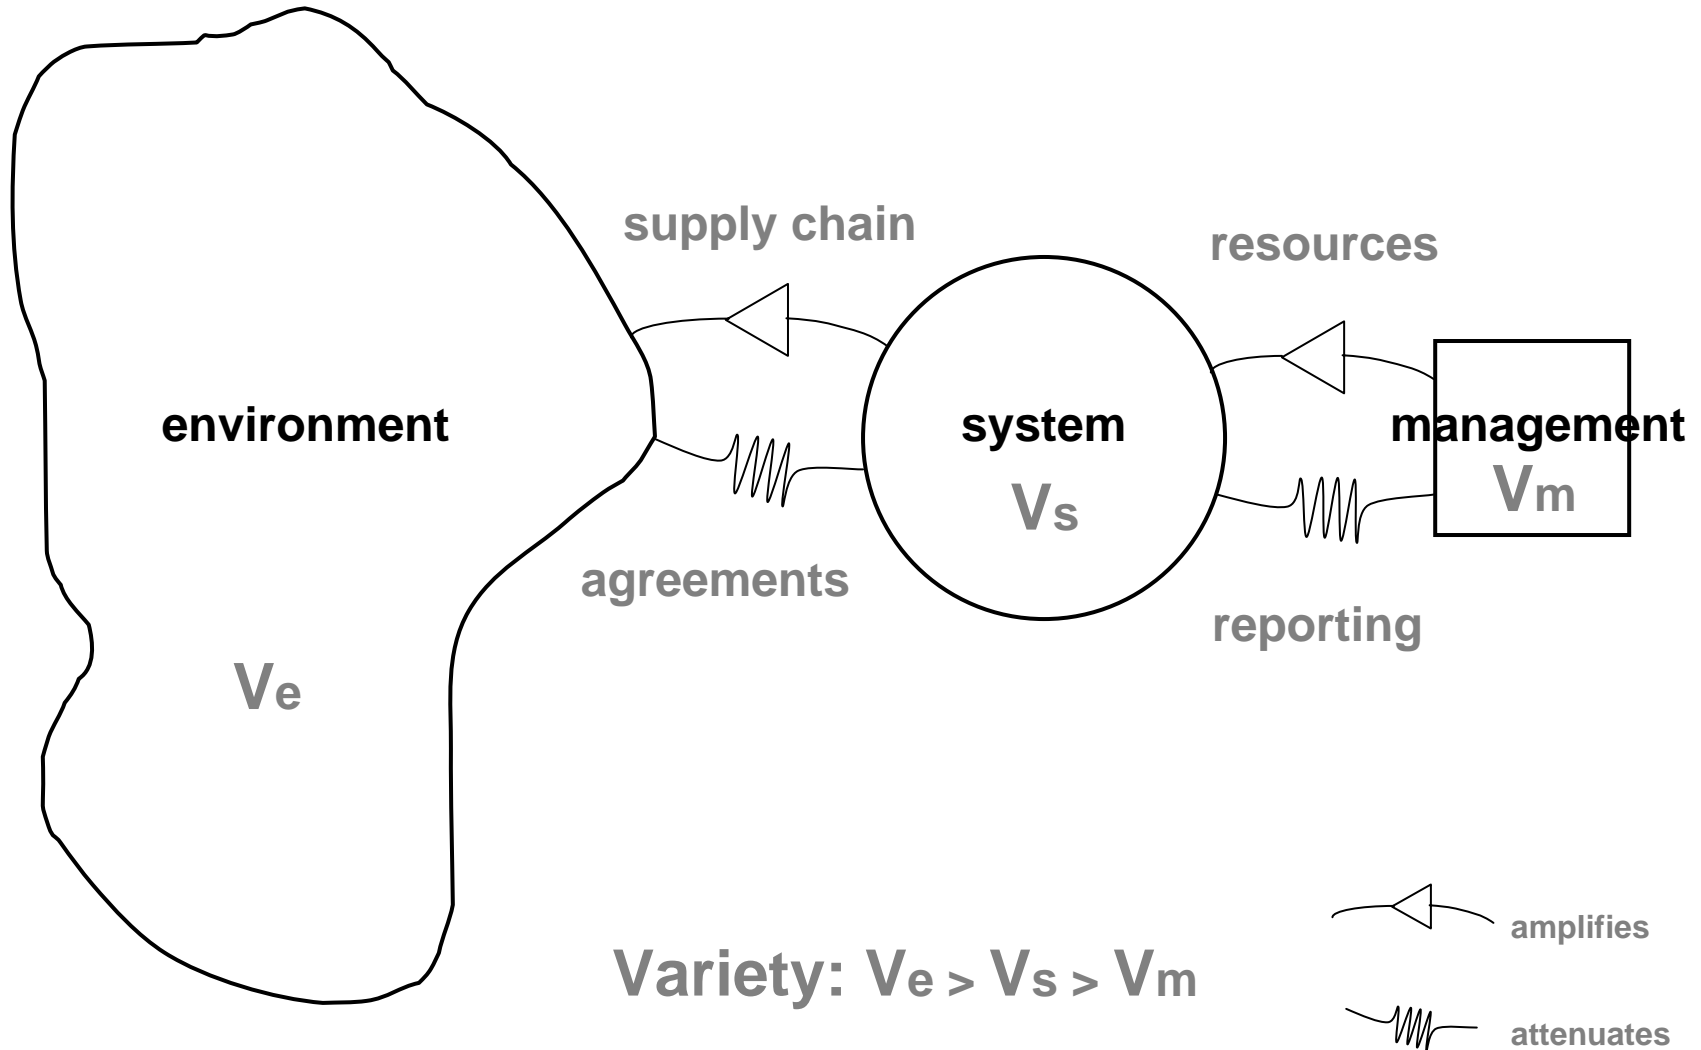

**mutual adjustment /
co-ordination**

VIABLE SYSTEM

MANAGING COMPLEXITY

BUSINESS MANAGEMENT SYSTEMS

1. Specification for a generic system and a set of procedures
